NABL ACCREDITED CIVIL ENGINEERING
TESTING LABORATORY

add.
Material

Precision Testing. Absolute Trust.

Material testing, on-site sampling, and geotechnical support for infrastructure teams that need dependable results and clean documentation.

[Request Testing Support](#)

Equipment Calibration

Accurate, well-calibrated equipment is crucial for reliable and precise measurements. We provide full calibration services.

Remove service

geo technical Investigation

Consultancy Services

Expert guidance and advisory services for construction quality, material selection, and geotechnical challenges.

Material collection handled with the same discipline as lab testing.

Qualitex supports project teams with site visits, material sampling, geotechnical investigation support, concrete core handling, and documented collection workflows that protect sample integrity from source to report.

Schedule a Site Visit ✓

Explore Methods ✓

Advanced Non-Destructive Testing

Structure-friendly checks for assessing in-situ concrete and reinforcement condition with high precision.

Concrete Mix Design

Specialized mix designs for strength, durability, and special applications like Self-Compacting Concrete.

buildings, plants, and public infrastructure.

Comprehensive construction material testing inspired by the needs of active sites: concrete, NDT, steel, soil, aggregates, bitumen, base-subbase materials, and chemical checks.

Pile & Foundation Testing ✓

Comprehensive assessment of deep foundations using advanced techniques like Pile Integrity, Dynamic Load, and Cyclic testing.

— EQUIPMENT & MACHINERIES

Calibrated machines, controlled processes, and traceable results.

Dedicated lab equipment supports repeatable testing for civil engineering materials, construction products, pavements, and infrastructure quality control.
